Data science is everywhere and its proponents advocate its uses in nearly every field and industry, from political advertising to the criminal justice system. However, in recent years, the voices of those who scrutinize the methods and practices involved with applications of “big data,” algorithms, and AI have grown stronger. In this class, we will explore these more critical perspectives and examine the ways algorithms create and reproduce forms of discrimination and systemic inequality. In doing so, you will continue to build on the skills learned in WCWP 10A, further developing your argumentative and analytical writing skills.
